2027 GRADUATE HIRING | GROWTH ENGINEER ROLE

OPTION 2: SOCIAL MEDIA MARKETING AND CONTENT ENGINE

Seven-day individual assessment | Option 2 of 4 | Social media marketing and content creation

Goal: Build IncuBrix's social growth engine: a clear strategy, 30 ready-to-publish posts, and an AI-powered workflow that turns any single input into a week of platform-ready content. IncuBrix should be able to start posting on day one and keep posting every week without extra effort.

1. What you must deliver

Part	Required outcome
Product and market insight	Use the product. Submit 5 observations and the 3 biggest social media opportunities. Audit IncuBrix's current accounts and 5 competitor or peer accounts, using real numbers.
Strategy	Target audience, at least 3 platforms and why, 4 to 6 content pillars, brand voice rules, posting frequency, and how social activity turns into sign-ups.
30 ready-to-publish assets	Across at least 3 platforms, including at least 10 short videos (60 seconds or less) and 5 carousels or graphics. Each one has a hook, caption, hashtags, call to action, tracking link and editable source files.
Content engine	A repeatable workflow that turns one long input (blog, podcast, demo or webinar) into at least 10 platform-specific assets with brand checks and a scheduler-ready export, in under 30 minutes.
Real-audience test	Either publish at least 10 assets over at least 5 days on accounts you own and report real results, or run a preference test with at least 20 people from the target audience.
Launch kit	30-day calendar, daily workflow, owners, tools, optional paid-boost budget, and targets for reach, engagement rate, clicks and sign-ups.

2. Audience and platforms

- Audience: creators (podcasters, YouTubers, expert-led creators) and the people who help them (editors, small content teams), mainly in the United States, Canada, United Kingdom, Ireland, Australia, New Zealand and Singapore.
- Platforms: choose at least 3 from LinkedIn, Instagram, YouTube Shorts, TikTok, X, Threads, Facebook and Reddit, and explain why they fit this audience.
- Only claim product features you have seen working in the product. Never invent numbers, testimonials or customer names.

3. When an asset counts as ready

An asset counts only when it passes every check below.

Check	Simple requirement
On-brand and accurate	Follows your voice rules; every product claim is something you saw working in the product.
Platform-native	Right format, length, aspect ratio and style for that platform, with a strong hook in the first line or first 2 seconds.
Useful	Teaches, shows or proves something a creator cares about. Not generic promotion.
Rights-safe	Licensed music, images and fonts; no copyrighted characters; no one's face, voice or work without consent; AI-generated media labelled where a platform requires it.
Measurable	Has a tracking link (UTM) and a target metric.
Ready to publish	Final file, caption and scheduled slot exist. IncuBrix needs no rework.

Minimum result: 30 ready assets on at least 3 platforms, including at least 10 videos; at least 85% of IncuBrix's 20-asset random audit passes every check; 0 rights issues; the engine produces at least 10 assets from a new input during the live review; and the real-audience test is completed and reported honestly.

SUBMISSION AND EVALUATION

4. Submit these five items

Item	What to submit
1. Submission Workbook	Complete the Excel workbook for your option. Yellow cells are your inputs; green cells calculate. Fill in the Self-check tab with a link to evidence for every claim.
2. Main output	A content folder with every final asset and its source file, plus calendar.csv (one row per asset, same columns as the workbook).
3. Engine	Private repository or shared folder with your code or workflow, configuration, tests and a README with one clear run command. Do not include passwords or secret keys.
4. Launch kit	One document IncuBrix can act on next Monday: step-by-step plan, owners, tools, budget, targets and risks. Nothing should need rework.
5. Two short videos	Unedited. (a) Product walkthrough, up to 5 minutes. (b) Technical demo, up to 8 minutes: one normal run, a refresh on new input, and recovery from one simple failure.

5. How IncuBrix evaluates

Area	Points	What full marks look like
Product and market insight	10	Specific observations backed by evidence, and growth opportunities IncuBrix can act on.
Content and strategy quality	35	Assets have strong hooks and are ready to post (15), strategy fits the audience and platforms (10), and the real-audience test shows honest, useful results (10).
Automation and scale	20	Another person can run your engine from the README. It refreshes, avoids duplicates, logs errors and shows runtime and cost at scale.
Launch readiness	10	IncuBrix could start next Monday from your launch kit with no rework: clear steps, owners, budget and targets.
Live review	25	You trace random items back to evidence, run your engine on a new input we give you, and explain your decisions honestly.

Final result: below 65 = not selected | 65-74 = hold | 75-84 = strong hire | 85+ = exceptional hire, only when all exceptional requirements also pass.

6. How we check your work

- IncuBrix recalculates every number from your files. Totals typed into the workbook are not official.
- We pick 20 assets at random from your main output (you cannot choose or replace them) and check each one against the quality bar.
- We run your engine ourselves, using only your README.
- Live review (45 minutes): you trace 5 random assets back to their evidence, run your engine on a small new input we give you, and explain one decision you would change.
- A growth reviewer and an engineering reviewer score separately. Any change to a score must point to evidence.

7. Exceptional result

- 60 ready assets, including at least 20 videos, with at least 90% passing our audit.
- The real-audience test beats a stated, sourced benchmark for engagement or preference.
- The engine produces a full week (at least 20 assets) from one input in under 30 minutes, with cost documented.
- A creator-collaboration or user-generated content format that is ready to run.

8. Tools and integrity rules

- Use any AI tool, data source or service, free or paid. List them all in the workbook. No paid tool is required, and IncuBrix does not refund costs unless agreed in writing first.
- Work on your own. Disclose any manual work and where AI helped.
- Publish only on accounts you own, and never present them as official IncuBrix accounts. Do not contact creators or brands. Do not buy followers or engagement.
- No fake, bought or guessed data, contacts, followers, engagement or results. Do not scrape against a site's terms, bypass logins or use private or leaked data.
- Follow privacy and marketing laws (for example India's DPDP Act, GDPR and CAN-SPAM) and every platform's rules.

- Made-up evidence, or being unable to explain and rerun your own work, disqualifies the submission.
- If a product feature or source is unavailable, record it with the date, time and evidence. You are not expected to work around restrictions.

Final check: Before submitting, confirm: 5 observations, 3 opportunities, account audit, strategy, 30 ready assets with at least 10 videos, content engine, real-audience test results, launch kit, completed workbook, calendar.csv, README, repository access and both video links.
